

Number of days of condensation appearance, according to various geographic zones.

The anti-condensation coating reduces the number of days during which condensation appears.

Source: calculations made by R&D Centre of AGC (Jumet - Belgium), based on data from Météo France (year 2011) : external air temperature (°C), humidity, wind, layer of cloud

Defined parameters: vertical window, $U_g : 1.1 \text{ W}/(\text{m}^2 \cdot \text{K})$, comparison between double glazing with and without condensation coating (Top^{N+})
